Voici quelques exemples : AdminLTE utilise les plugins suivants. Pour obtenir de la documentation, des mises à jour ou des informations sur la licence, veuillez consulter les liens fournis. AdminLTE prend en charge les navigateurs suivants : IE9+ Firefox (dernier) Safari (dernier) Chrome (dernier) Opera (dernière) Note : IE9 ne prend pas loads transitions or animations. The model will work properly, but it won't use animations/transitions on IE9. To switch from the 1.x version to the latest version, follow this guide. New files Be sure to update all CSS and JS files that are related to AdminLTE. Otherwise, the provision will not work properly. The most important files are adminlte.css, CSS file skins, and app.js. The layout changes the div should be placed immediately after the body label rather than after the header Change the div .header to .main-header .liv class=header.right-side in .content-wrapper .div class=content-wrapper. Change the .left-side class into .hand-sidebar -div class=sidebar- In the navbar, change .navbar-right to .navbar-custom-menu 't'div class=navbar-custom-menu They should be replaced by a pop-up color class such as aqua text or red text. Login, recording and lock screen pages There are major changes to the marking and HTML style of these pages. The best way is to copy the page code and customize it. And you should be ready to go! Mailbox Mailbox got an upgrade to include three different views. Views are inbox, read mail, and dial new emails. To use these views, you need to use the HTML files provided in the pages/mailbox folder. Note: The old mailbox layout has been deprecated in favor of the new one and will be removed by the next version. Thanks to many AdminLTE users, there are several model implementations for easy integration with back-end frameworks. The following are some of them: Note: these implementations are not supported by Almsaeed Studio. However, they provide a good example of how to integrate AdminLTE into different frameworks. For the latest version of AdminLTE, please visit our repository or website AdminLTE is an HTML model that can be used for any purpose. However, it is not meant to be easily installed on Wordpress. It will take some effort and enough knowledge of the Wordpress script to do so. Is there an integration guide for PHP executives such as Yii or Symfony? Short answer, no. However, there are forks and tutorials around the web that provide information on how to fit in with many different frames. There are even versions of AdminLTE that are integrated with jQuery ajax, AngularJS and/or MVC5 ASP .NET. How can I be informed of the new AdminLTE versions? The best option is to subscribe to our mailing list using the almsaeed Studio subscription form. If you don't like it, you can look at the repository on Github or visit Almsaeed Studio from time to time for updates and announcements. AdminLTE is an open source project that is licensed under the MIT license. This allows you to do just about anything you want as long as you include copyright in all copies or substantial parts of the software. is not necessary (although much appreciated). 't'/div
